

Palletising plants

For all sizes of timber and plastic pallets

Typical application

The equipment is typically used within the Food and Drinks industry for the palletising of loose products. The system is suitable for loading all sizes of pallets as well as standard Europallets. The concept is modular and a complete plant includes a pallet magazine for empty pallets, an inlet and an outlet conveyor system. Layer pad insertion or a Styropor applicator can be supplied if required.

Process

The products are pre-grouped after which the assembled layer is placed on the pallet. Once the layering and packing profile is fully loaded, the pallet is discharged and a new empty pallet is loaded from the pallet magazine.

Technical specifications:

- All stainless materials
- Operator adjustable Grouping pattern according to requirement
- Multi size pallet handling

Accessories

- Transfer car
- Angle transfer units
- Fork lifts
- Lamel conveyors
- Chain conveyors
- Pallet Binder
